CREATING A SOCIETY WITH SMOOTH AND SAFE TRAFFIC

Traffic Control Center

Bicycle Navigation Marks

LED Road Stud Lights

## Keeping roads safe

Japanese-language guided tours of the TMPD Traffic Control Center are available (reservations required).

Scan the 2-D bar code for more details on Zone 30s (only in Japanese).

The Traffic Control Center collects and provides information on road traffic to ensure safe and smooth traffic.

To ensure a safe environment on community roads, the TMPD designates areas subject to a 30kph speed limit as "Zone 30s". LED road stud lights coordinated with traffic signals are designed to protect pedestrian traffic, while bicycle navigation marks and lines lead to a smooth and safe flow of vehicles.

To further ensure safety at intersections with traffic lights, the TMPD has adopted exclusive pedestrian crossing as well as audible signals and "Yutori-Signal", a system allowing pedestrians enough time to cross roads.

Additionally, in order to deter illegal parkings that cause traffic congestion, the TMPD is taking various measures to keep order on the road, which include installment of parking meters and parking ticket machines, and giving guidance to the facilities where illegal parkings happen frequently.

## Enforcing traffic law and investigating traffic accidents

Investigating a traffic accident

Liaison Conference on Prevention of Electronic Scooter Accidents

The TMPD cracks down on offenses like illegal parking and blocking pedestrian right-of-way as well as more serious violations including hit-and-run, reckless driving and insurance fraud disguised as traffic accidents. The TMPD also aims to eliminate obstructive driving, known as "road rage".

In order to protect children and the elderly from tragic traffic accidents, the TMPD is taking additional measures in school zones and other residential areas. We have also increased our effort to prevent traffic accidents by encouraging cyclists and e-scooter riders to follow the rules of the road.

In addition, to deter traffic accidents caused by parked vehicles, the TMPD has released its enforcement guideline that reflects the request of residents and the actual conditions of traffic accidents, and tightened control over illegally parked vehicles in accordance with the guideline.

Cracking down on illegally parked vehicles
